

- Customer to Movies: I chose that customers have 1 or many movies since they wouldn't be a customer if they didn't see a movie (who buys concessions but doesn't see a movie?) and they can choose to see multiple movies. I chose 0 or many for customers to movies as a movie can have 0 customers or a lot of customers.
- Customer to Concessions: I chose 0 or many for both relationships here as a customer can have 0 or many concessions and concessions can have 0 or many customers.
- Customer to Tickets: I chose 1 or many for tickets as a customer has to have at least 1 in order to be a customer, but can have multiple tickets. I chose 1 and only 1 for customers related to tickets as each ticket is for only 1 customer.
- Movies to Tickets: I chose 0 or many for tickets as a movie can have 0 tickets sold or many tickets sold. I chose 1 and only 1 for movies because a ticket has to be for a specific movie.
